

Challenges in the Current State of Electronic Health Records (EHR)

Repeated Breaches
of Sensitive
EHR Data

No Patient-centered
Care and Autonomy
within EHR Systems

Insufficient
Interoperability in
Current EHR Platforms

Lacking Audit and
Traceability Functions
in EHR Setups

Why Adopt a Blockchain-based EHR?

EHR Security bolstered
by Decentralized
Distribution

Ensuring Data Integrity
with Immutable Audit
Trail and Provenance

Seamless
Interoperability among
Different EHR Systems

Empowering Data
Ownership and
Consent Management
